

NEW 'Mini Handle'

As the old Mini 900 monitors are no longer produced, they have been superseded by the new 'Mini Handle' which accommodates the latest RadEye SX or GX models and seamlessly links them directly to the original Mini Probes in one convenient, compact mount.

The unit comes ready assembled and is simple to use. Also the new unit has enhanced detection capability utilising the latest RadEye electronics.

User operation is extremely simple with switch on and warm up in Just a few seconds.

The probe can either be used in situ in the handle or simply removed from the mount for 2 handed operation.

The handle is a cost effective modern version replacement for the Mini-900 and all the existing Mini probes can be retrofitted to the new 'Mini Handle' and RadEye units.

For GM tubes we can also offer the RadEye GX (this is dedicated for Geigers) however the RadEye SX version can interface to both scintillation probes like the 44A and B and any of the Geiger probes like the D Probes.

'Mini Handle' Features:

- Handle
- Probe
- RadEye SX or GX
- Curly cable with MHV connecting on either side
- Calibration
- Option for rechargeables batteries and charger—see RHS picture

EP-15 probe version shown on RHS
